Introduction

Introduction

As part of ongoing efforts to improve and revitalize the urban centres of the Town of South Bruce Peninsula (the Municipality), Basterfield & Associates were retained to develop a Streetscape Plan for Downtown Wiarton. The scope of work included the review of existing documents associated with downtown improvements, facilitate community consultation and develop a detailed Streetscape design concept including design options, style, and budget considerations.

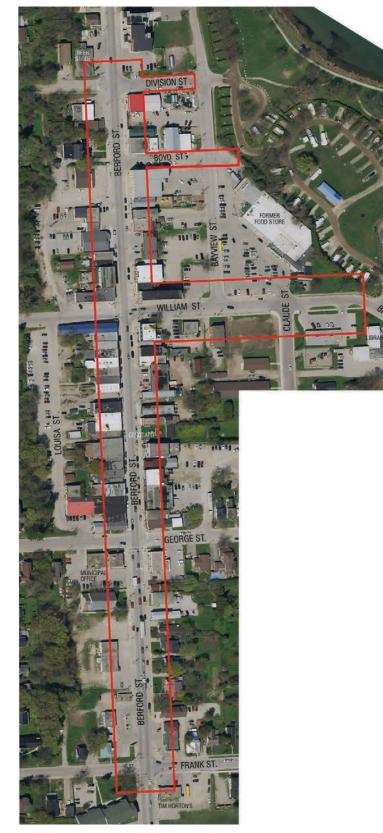

Through the Municipality's Downtown Strategic Plan efforts, the Town of Wiarton has been positioned as 'Basecamp to the Bruce Peninsula' with distinctive branding. Through the cooperative efforts of the County of Bruce, Wiarton Chamber of Commerce, Wiarton BIA and the Wiarton Revitalization Committee the Municipality has completed work to improve the overall vitality of park spaces, initiated facades improvements and developed targeted market campaigns.

With the need for future civil infrastructure replacement and updating, the Municipality through Provincial funding has seized the opportunity to plan in advance the future physical environment of the downtown. This opportunity has afforded time to move ideas through a thorough public consultation process and chart a vision for the streetscape and associated features, ensuring that the Town's distinct brand and community expectations are reflected in future construction activity. It should be noted that the design, features and furnishings identified in this report reflect the current visions from both the Downtown Streetscape Committee and the community workshops. This is a conceptual design report providing direction that will inform final detailed design that will advance in part or in whole. During detailed design, further refinements can and should occur in order to align with funding capabilities.

The study area of this downtown streetscape design process runs along Berford Street from Frank Street to the south and north to Division Street, William Street from Berford to Brown Streets as well as Boyd and Division Streets.

This document outlines the sequence of events, approach, and methodology of the design process and the culminating conceptual streetscape plans with supporting streetscape features and order of magnitude costs.

Study Area

Site Characterization

A site characterization plan was prepared to summarize the consultants first impressions, allow discussion and conversation during the first workshop, divide the study area up into manageable design precincts and begin the process of a more detailed site analysis to inform design decisions. Refer to pages 4-6 for characterization areas and related text.

Site Analysis

An analysis plan was prepared in a diagrammatic form to identify opportunities and challenges without committing to design solutions. Using the areas laid out in the Characterization plan, the design team identified various feature areas for special design attention and general solutions and opportunities for spaces associated directly with the existing physical conditions within each area. Refer to site analysis plans and text on pages 8-10.

Public Consultation & Design Development

A public consultation process was designed to fully engage stakeholders and the community in workshop conversations that would guide the design team at key milestones of the design process. Key-informant interviews were conducted, a Downtown streetscape information booth was set up at the Farmers Market during the month of August, and the Streetscape Design Committee (SDC) meetings were open to the general public. All meetings and results were posted to the Municipal website for public review and comment.

The following is the schedule of SDC meetings and Community workshops:
1. April 28th 2016 – First SDC meeting
2. May – Key informant interviews
3. June 1st 2016 – First Community Workshop
4. August 18th 2016 – Second SDC meeting
5. August 19th 2016 – Farmers Market booth
6. September 21st 2016 – Second Community Workshop
7. November 16th – Third SDC meeting
8. December 6th 2016 – Presentation to Council (plans posted for display at Municipal Offices.

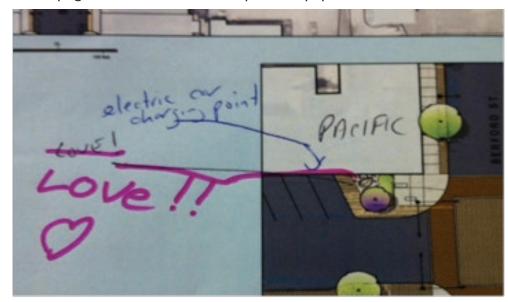

Workshop results and minutes of the SDC meetings are available on the Municipal website.

Streetscape Concept Plans

Streetscape concept plans have been prepared and refined over the course of the public consultation process. Small group discussions and reporting along with personal preferences through dotting exercises assisted with directing the design team towards the final plans.

Alternative design solutions, features and furnishings were vetted through both Community workshops and SDC meetings. The plans provide both site specific solutions and an overall design theme that establishes Berford Street as the premier "Main Street" of the downtown with slightly more refined elements such as benches, lighting, and rest and conversation areas. All other streets and connections to the waterfront follow the design characteristics of Berford Street but using materials and features that reflect a "Waterfront District". Repurposing the decorative concrete poles on Berford Street, use of timber and stone for benches and eye catching timber and stone wayfinding towers help connect the Downtown to the Waterfront and Bruce Trail. Please refer to pages 12-15 for the streetscape concept plans.

Streetscape Features and Furnishings

The selected features and furnishing illustrated on pages 17-25 respond to both community and Committee input while supporting the "basecamp" brand established by the Municipality. Some of the features such as the limestone rock clusters, street shade structures, pedestrian guard rails and waterfront icon features are designed to be unique to Wiarton and not found in any other downtown. Waste containers, wayfinding signage, Berford Street benches and lighting assemblies are manufactured and widely available products. The blend of "Wiarton specific" designs and "off the shelf" products provides durability, availability and function combined with unique "out of the box" approaches that will establish how the Town of Wiarton will be remembered by visitors and appreciated by residents. Further more, Wiarton specific designs also provide opportunities for local trades and the arts community to be fully engaged in the new vision for Wiarton. Unique Streetscape features and furnishings combined with pedestrian first streetscape plans will be one of the most powerful self marketing tools that the Town will experience.

Careful design and execution of custom local products is essential to the success of both the product and the overall impression of the downtown. Careful management of the delivery of custom products must be given a priority and in this regard the Streetscape Design Committee should stay fully engaged in the process and consider retaining a manager or consultant with design and construction knowledge that is capable of directing and reviewing design and fabrication of all custom products to ensure that they meet the design intent of this plan and the safety and accessibility standards for public design.

Streetscape Budget Costing

The final pages of this report provide order of magnitude costs for the areas depicted on the streetscape plans. Each cost estimate covers a particular area of the streetscape plans. Areas of the plan and related cost estimates are identified on the plans as Cost Area 1a, 1b, 2a etc. and are labelled at the top of each plan area. The cost estimates are correspondingly identified on the header of each estimate.

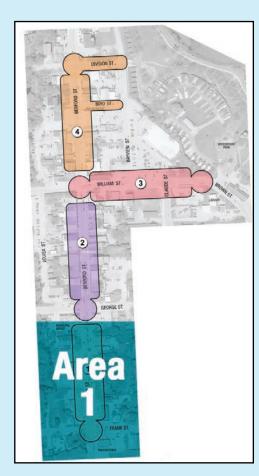

Costs reflected on the plans are derived from current 2016 costs from similar projects recently tendered. Local trade costs do vary from region to region in Ontario and variations in costs can be seen with how much of a project is actually tendered and also if the streetscape work is part of a larger project such as road infrastructure. Cost estimates do not reflect demolition and removals prior to installation.

Phasing of the projects included in this plan are very much contingent on available funds for projects. There are aspects of the plans that should wait until infrastructure and roadwork is required in order to avoid doing things twice. With this in mind there are portions of the plans such as the Boyd Street parkette or the William Street boulevards along the former food store that could advance prior to infrastructure works. Site furnishing such as waste containers benches and bike racks could be installed provided they are removable when infrastructure or road work advances. The Municipality should ensure that future improvements are reviewed by the Public Works Department prior to advancing work. With this in mind it could be possible to locate and install the waterfront icon structures providing they do not impede future road and curb work.

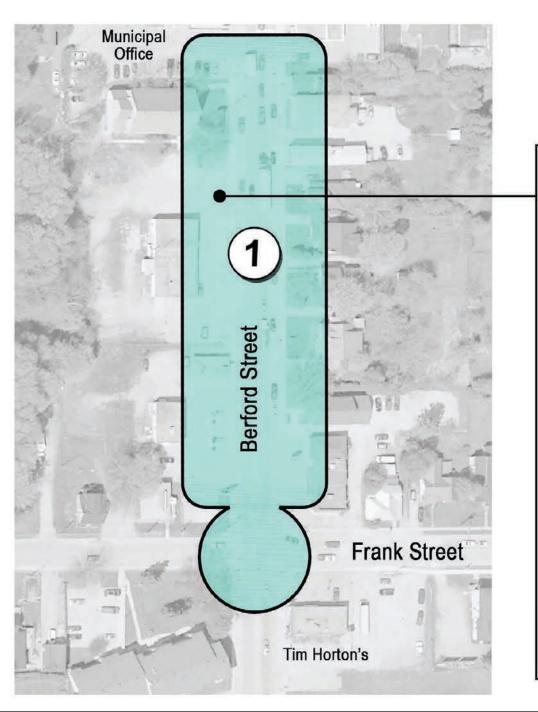

manager.

As with the development of custom furnishings advancing improvements contained in this document will require careful and ongoing management and communication between the Municipality, the SDC and a streetscape

Site Characterization Plans

Key Plan

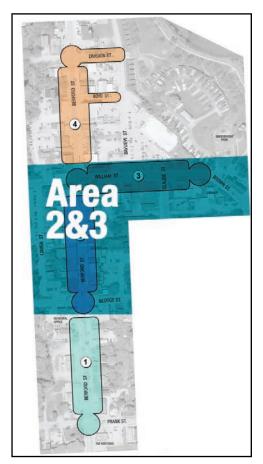

Area 1 Characterization Plan

Area 1

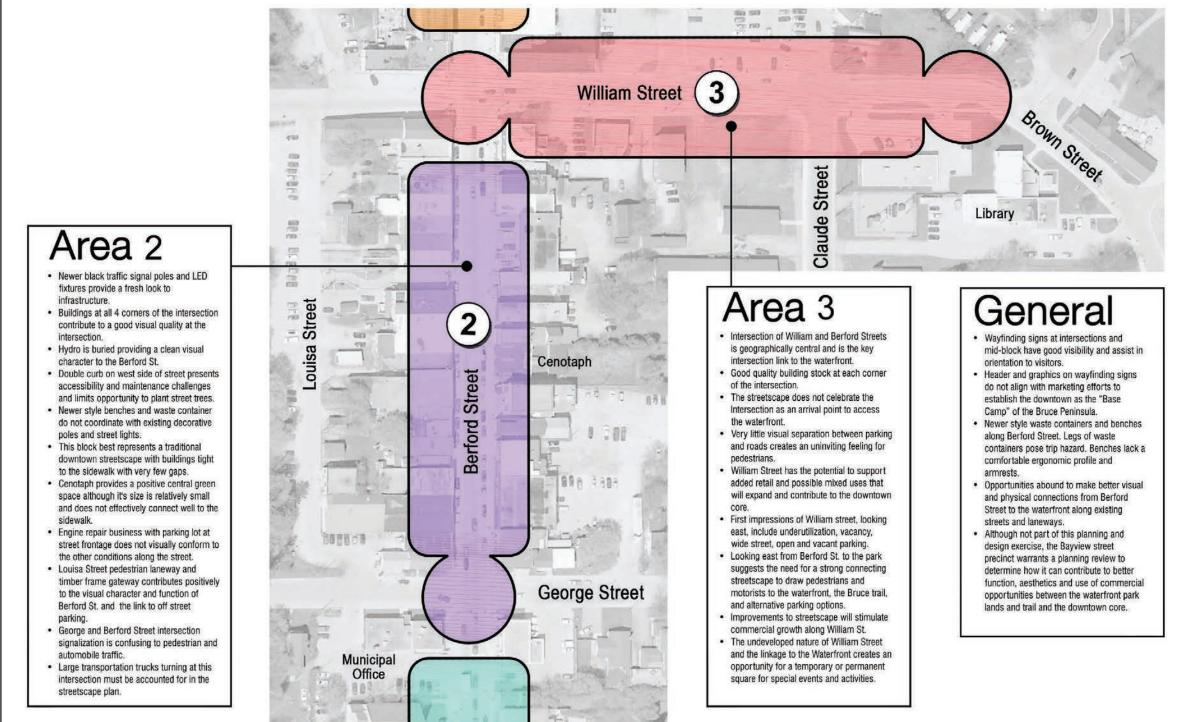

- · First major intersection for visitors arriving in the downtown from the south.
- · Newer black traffic signal poles and LED fixtures provide a fresh look to infrastructure.
- Corners of intersection in front of Daisy . Mart and Mac's are poorly defined between private property and public space, automobiles and pedestrians.
- In several locations along the block automobiles have priority over pedestrians due to open areas and undefined parking and driveways.
- · No definition between asphalt and concrete contributes to a visually open and continuous paving character along the streetscape
- This block contains some residential homes that appear to be transitioning into commercial shops. These shops and homes are set back from the street providing a non-traditional boutique style downtown commercial frontage. Frontage space has potential to be utilized by vendors and to visually and functionally contribute to the streetscape.
- Hydro poles and utilitarian light fixtures along west side of Berford are visually unappealing and limit potential for street trees.
- · Post office and Town Offices contribute positively to the built form of the block.

General

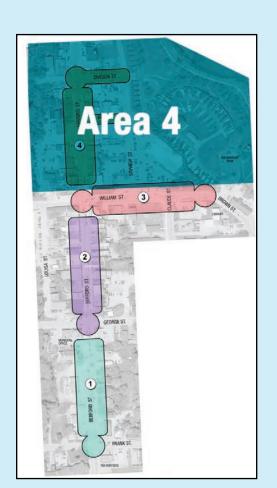

- · Wayfinding signs at intersections and mid-block have good visibility and assist in orientation to visitors.
- Header and graphics on wayfinding signs do not align with marketing efforts to establish the downtown as the "Base Camp" of the Bruce Peninsula.
- Newer style waste containers and benches along Berford Street. Legs of waste containers pose trip hazard. Benches lack a comfortable ergonomic profile and armrests.
- Opportunities abound to make better visual and physical connections from Berford Street to the waterfront along existing streets and laneways.
- Although not part of this planning and design exercise, the Bayview street precinct warrants a planning review to determine how it can contribute to better function, aesthetics and use of commercial opportunities between the waterfront park lands and trail and the downtown core.

Key Plan

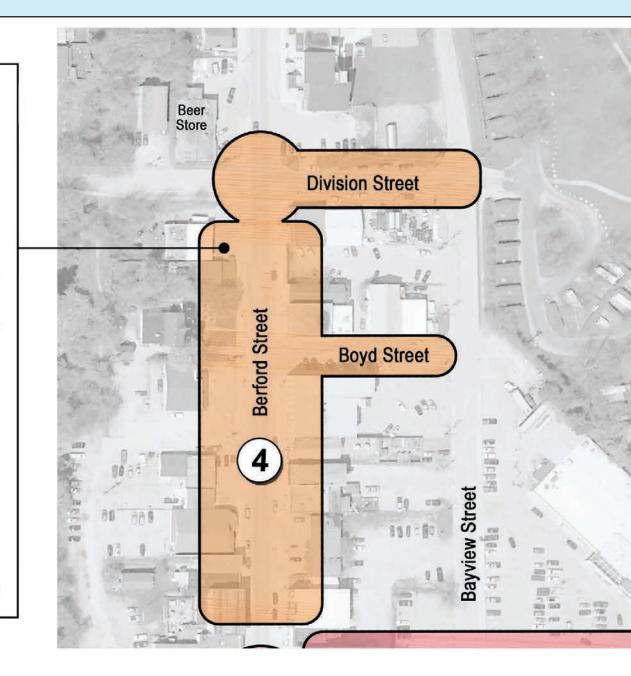

Area 2 & 3 Characterization Plan

Area 4

- First major intersection for visitors arriving in the downtown from the north.
- In several locations along the block automobiles have priority over pedestrians due to open areas and undefined parking and driveways.
- No definition between asphalt and concrete contributes to a visually open and continuous paving character along the streetscape
- This block contains some shops and businesses that are set back from the street with parking at the front. Frontage parking areas need to be visually separated or buffered from the sidewalk and streetscape in order contribute to a new streetscape.
- Business access and parking function must be maintained
- Parking condition in front of stores at A&A Mart is very dangerous and uncomfortable for pedestrians and can contribute to vehicular collisions if parked vehicles are forced to back out onto Berford St.
- Boyd Street has a very unfriendly and utilitarian visual character but provides opportunity to connect to the waterfront and William street via Bayview St.
- The north side of Division and Berford Streets intersection is lacking any infrastructure such as sidewalks, decorative lighting and other streetscape features and should be considered and celebrated as a gateway intersection from the north.
- Street and property interface in front of Beer Store is awkward and dangerous.
- Division Street has potential to direct downtown vehicular traffic to William Street via Bayview Street.

Area 4 Characterization Plan

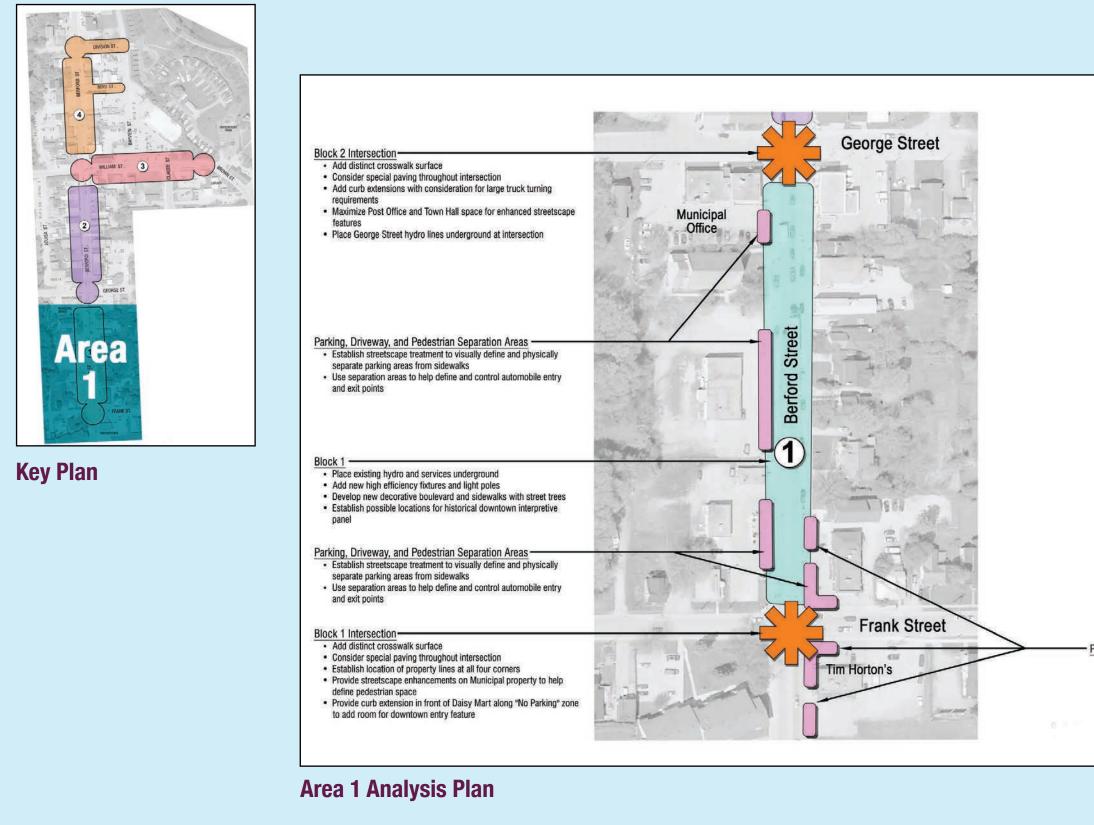

Key Plan

General

- Wayfinding signs at intersections and mid-block have good visibility and assist in orientation to visitors.
- Header and graphics on wayfinding signs do not align with marketing efforts to establish the downtown as the "Base Camp" of the Bruce Peninsula.
- Newer style waste containers and benches along Berford Street. Legs of waste containers pose trip hazard. Benches lack a comfortable ergonomic profile and armrests.
- Opportunities abound to make better visual and physical connections from Berford Street to the waterfront along existing streets and laneways.
 Although not part of this planning and
- Although not part of this planning and design exercise, the Bayview street precinct warrants a planning review to determine how it can contribute to better function, aesthetics and use of commercial opportunities between the waterfront park lands and trail and the downtown core.

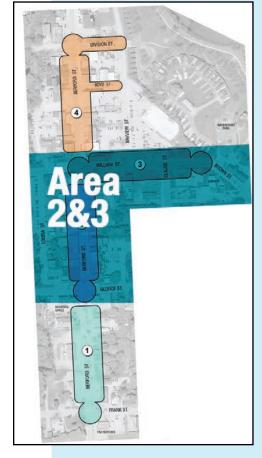

Waterfront Park

Site Analysis Plans

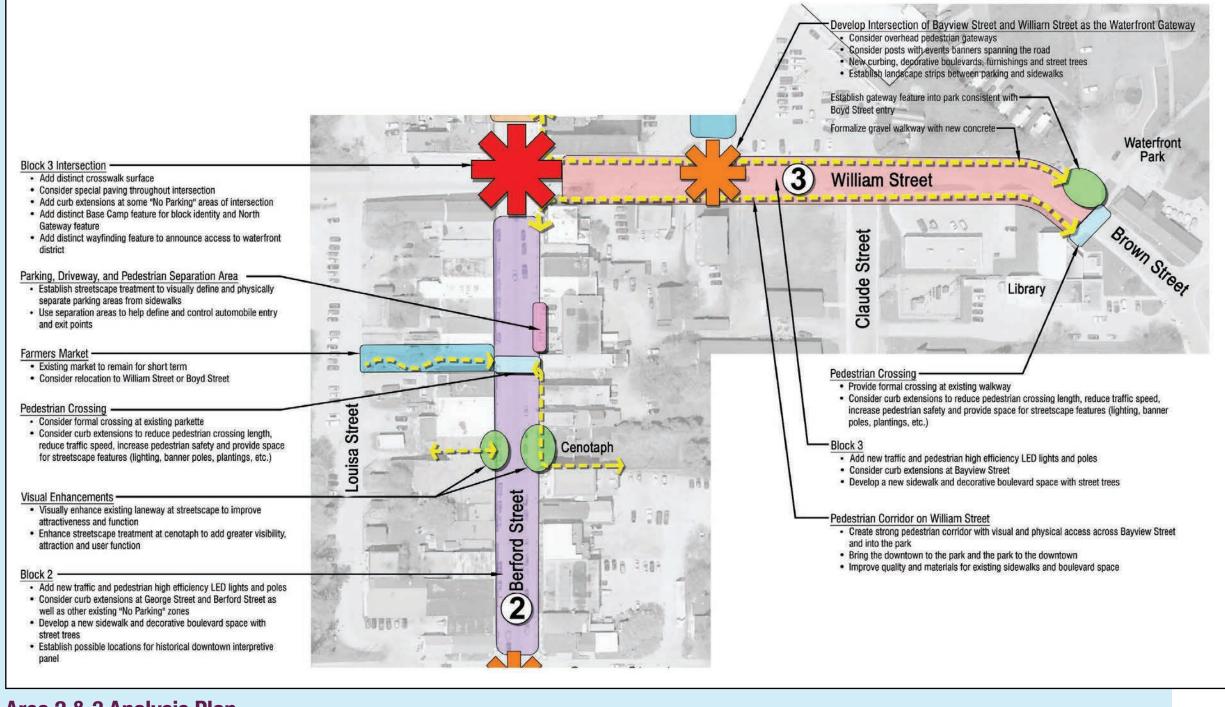

Parking, Driveway, and Pedestrian Separation Areas

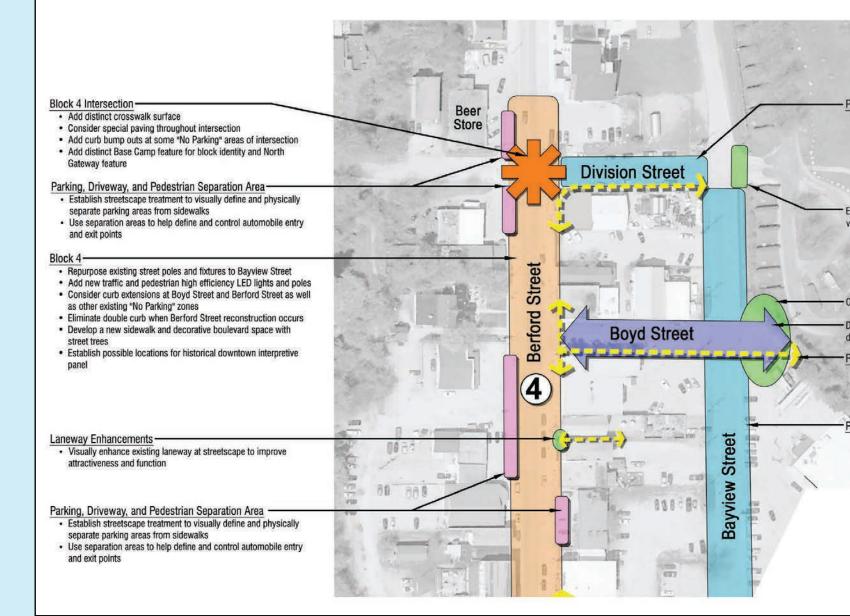

- Establish streetscape treatment to visually define and physically separate parking areas
 from sidewalks
- · Use separation areas to help define and control automobile entry and exit points

Key Plan

Area 2 & 3 Analysis Plan

Area 4 Analysis Plan

Area 4

WILLIAM ST

3

Pedestrianize Division Street

- · Establish streetscape treatment to visually define
- and physically separate parking areas from sidewalks
- Highlight Bruce Trail link
- · New curb to define pedestrian space from road
- · Street trees and decorative lights as extension of Berford Street
- Site furnishings and new lamp posts
- New sidewalk on south side of Division Street

Establish a Bruce Trail/waterfront wayfinding feature at terminus of Division Street to be visible from Berford Street

Consider acquiring small section of former Foodland property to align with Boyd Street right-of-way

Develop Boyd Street with narrower one way road to emphasize pedestrian walkway and consider decorative brick road surface to support temporary event road closures

Pedestrian Corridor on Boyd Street

- Create strong pedestrian corridor with visual and physical access across Bayview Street and into the park (subject to land purchase)
- . Bring the downtown to the park and the park to the downtown with street trees, walkway, and lighting

Pedestrianize Bayview Street

- New curbs to define pedestrian space
- Street trees, decorative lights (possible repurposing of Berford Street poles and fixtures)
 Establish landscape strips between parking and sidewalks

Streetscape Features and Furnishings

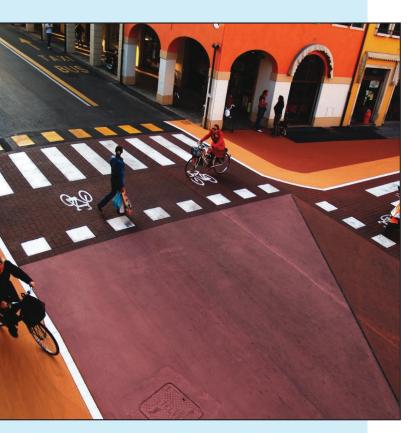

Amenity Strip Paving

• Substitute inlayed cut limestone with "Willie Footprints" on William Street only

Intersection Alternative 1: Interlocking Road Pavers

• Interlock product to match limestone and timber colour tones

Intersection Alternative 2: Tinted Asphalt

• Tinting in asphalt mix (not surface coating)

Berford Street Seating

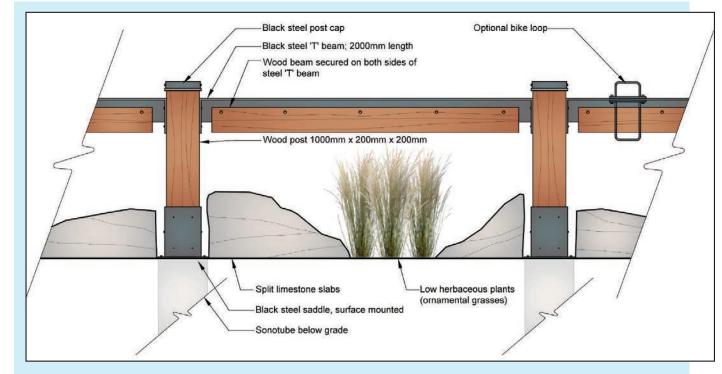

- Select colour or black steel and wood to match other streetscape components
- If space from curb to building facade is equal or greater than 3.65m (12') streetscape chairs or benches can be located along store fronts in consultation with owners
- Manufacturer: Equiparc, model: EP1965

Stone and Timber Bench at all Other Locations

- Custom fabrication with local limestone and red cedar
- Top of bench 450mm (18") from finished grade

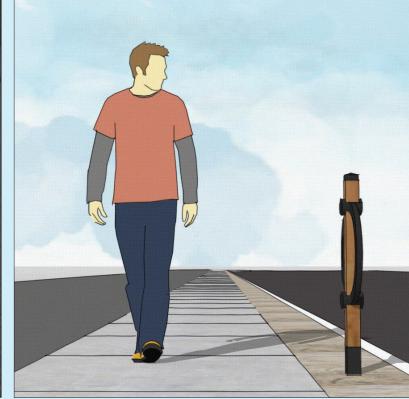

Decorative Guardrail

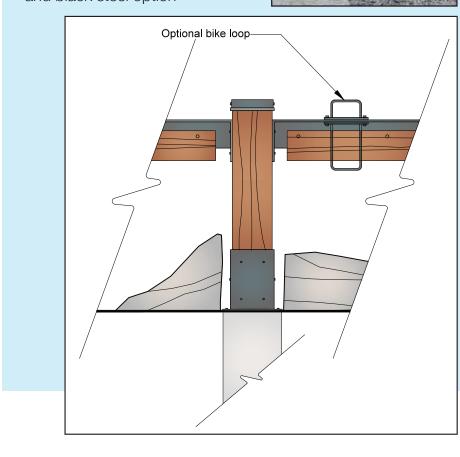

• Custom fabricated with local hemlock and steel fabrication

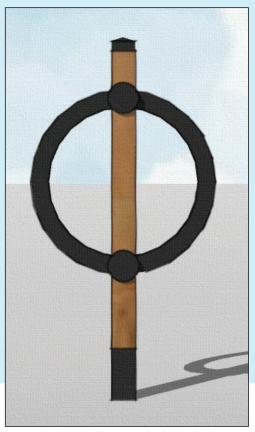

Bicycle Rack Selections

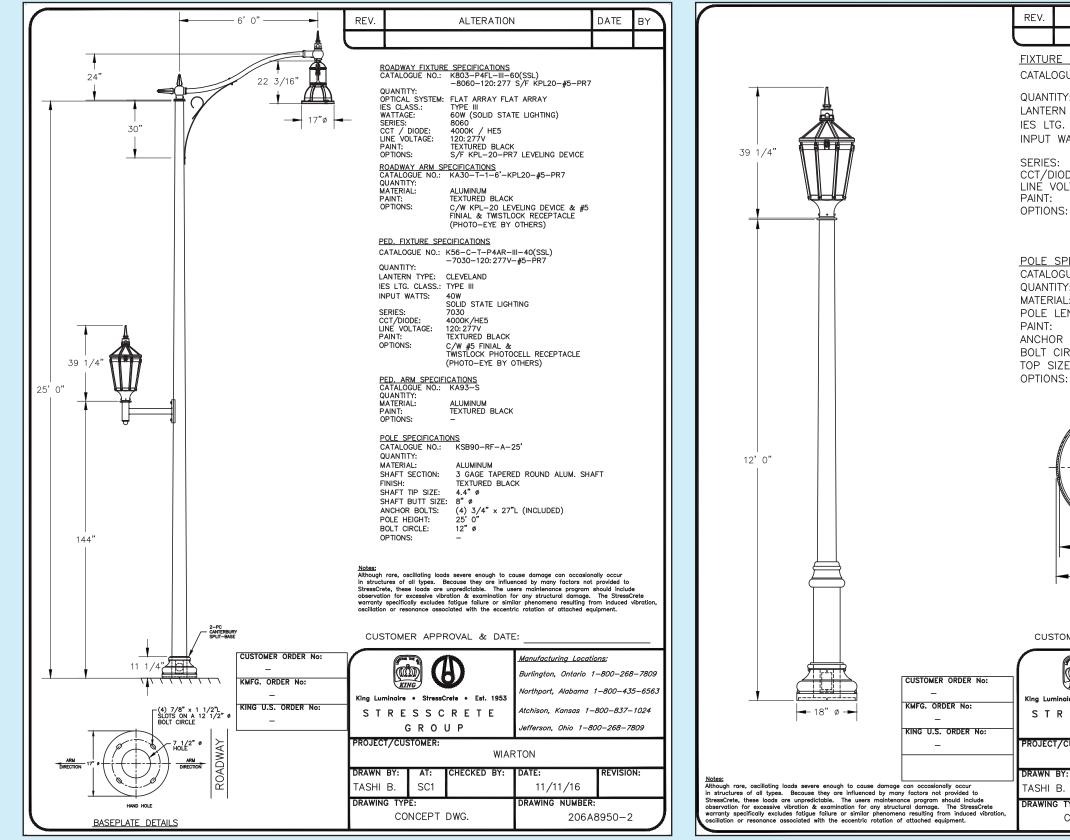

- Local arts installation option
 Decorative guardrail option
 Locally sourced and built wood and black steel option

Street and Pedestrian Lighting

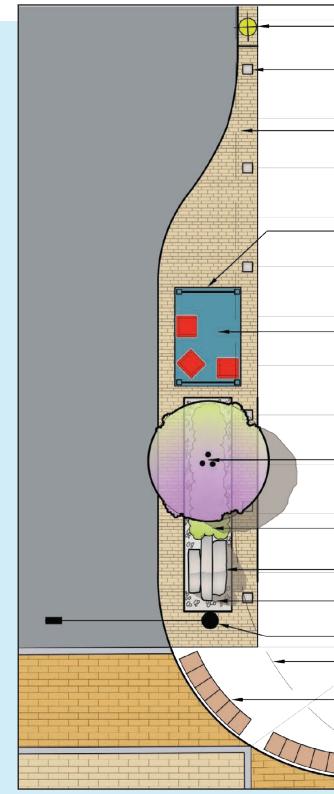

• Pole and light fixtures sourced through Tymat Solutions, 289-337-2884, matt@tymat.com

Street and Pedestrian Luminaries and Post

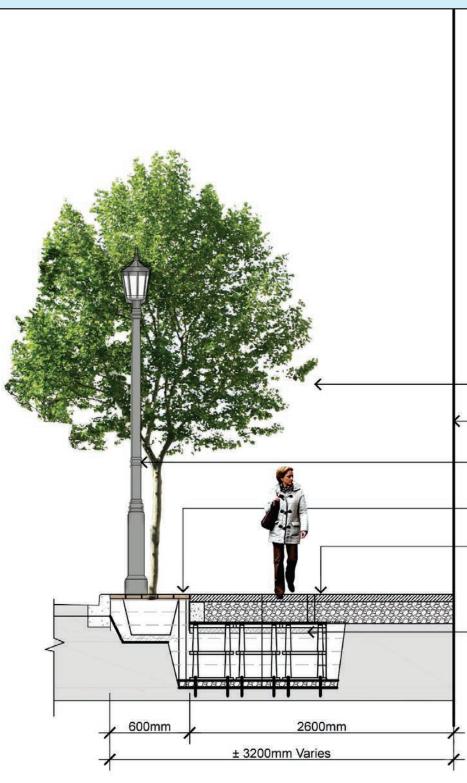

Note: Upgrade existing luminaires and repurpose concrete poles to waterfront district

Typical Curb Extension (Berford Street)

Decorative light pole.	
— — 300mm x 300mm inlayed cut limestone.	
 Limestone pavers in random lengths. Width vary between 75mm - 150mm. 	
 Interpretive panel facing inside, wayfinding panel facing out. 	
 Typical Berford St. shelter. Timber and steel with green roof. Fixed seating below. Interpretive and wayfinding panel on North end. 	
——————————————————————————————————————	
Low herbaceous plants (ornamental grasses).	
Limestone slab feature.	
 Smooth and round limestone cobbles 100mm - 200mm dia. 	
Traffic light pole.	
Existing curb line. Tactile warning plates.	

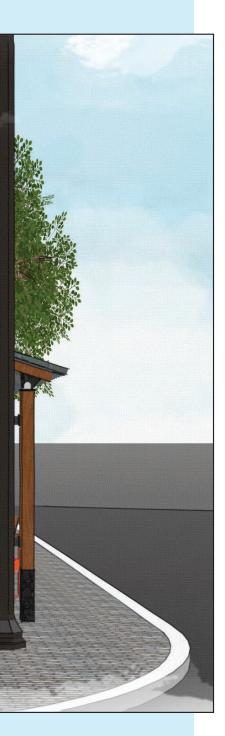

Typical Sidewalk Assembly (Berford Street)

	High branching open canopy street tree
ē	Building facade
	Existing or proposed lamp post
	Permeable paver amenity strip
	Barrier free poured-in-place concrete paving
	Soil cell and root barrier system
<u>_</u>	
<u>i.</u>	

Shade Structure (Berford Street Only)

- Timber with steel fasteners
- Steel roof with solar panels and/or green roof
 Seating area with directory and interpretive panels

Waste Containers

- Black steel and wood for Berford Street only
- Timber or recycled composite for all other locations (option to repurpose existing containters to park)
- Waste containers sized to fit amenity strip (± 600mm or 2')
- Manufactuerer: Equiparc, models: EP3549 and EP3630

Freestanding Wayfinding and Interpretive Panels, Parking Lot Signage

- Existing wayfinding with new basecamp header
- New interpretive panel with basecamp branding

Icon Features

- Timber and stone icon feature for William Street and Bayview Street
 Timber icon gateway feature to Bluewater Park and Boyd Street Parkette
